RAD with Low-Code Platforms

Rapid Application Development (RAD) using low-code platforms brings in abstraction and automation that enables very fast delivery of software solutions. It is a visual-based development approach that depends on modeling and drag-and-drop graphical interfaces instead of traditional coding.

The Secret Powers of Low-Code Platforms

Builds scalable, containerized, portable, and resilient cloud-native applications that can be deployed anywhere.

A Visual Integrated Development Environment (IDE) with ready-to-use UIs, workflows, & data models.

Built-in collaboration tools for greater agility in project management.

Automated tools for building, deploying, testing, and debugging the application.

The Low-Code Proposition

Companies are forced to come up with innovative solutions to meet market demands and changing customer expectations. Most companies have backlogs of requirements and not enough resources to handle them.

With low-code tools, the complexity of application development is reduced drastically, enabling even non-developers to create applications as and when required. They improve agility, productivity, and speed of the development process from roughly 20 steps to less than 10.

- Integrates Business and IT Teams
- Enables Swift and Frequent Deployment
- Uses API-based Integrations
- Drives Better Customer Experience

XTGlobal partners with Mendix low-code application development platform to create customized applications and functionality extensions for our clients. Build agility into your offerings and attain complete control over the development process with XTGlobal's IT expertise and Mendix's low-code development capabilities.

XTGLOBAL

A one-stop shop providing companies of all sizes with end-to-end technology solutions that enable digital transformation. We help businesses meet their short-term and long-term requirements by transforming the way they operate and aligning their offerings with market and customer demands.

mx mendix

Mendix is a proven leader among low-code platforms, recognized by Gartner in the Magic Quadrant for MXDP based on completeness of vision and ability to execute. Mendix also ranked first in Modern Web/Progressive Apps in Gartner's Critical Capabilities.

Looking for quick solutions to lower your IT team's backlogs? Get in touch to know how XTGlobal can accelerate your digital transformation journey with Mendix Low-Code Application Development Platform.
